

Andrew J. Shepherd, PhD

Assistant Professor

Symptom Research

*Targeting Neuroimmune Interactions for Relief of Neuropathic Pain*

Dr. Shepherd received his Bachelors' in cell biology and PhD in neurobiology from the University of Manchester, UK. He developed an interest in the neuropharmacology of pain as a Postdoc and Instructor at the University of Iowa and Washington University in St. Louis. His research in the Department of Symptom Research at MD Anderson seeks to understand the changes in crosstalk between macrophages and sensory nerves in chronic pain states, with the goal of identifying new therapeutic opportunities to treat debilitating forms of pain.
